

Medical Camera Module for Single-Use Endoscopes

Model : OM-1310

Features

- Optical size of 1/9"
- Pixel size 1.4 μm
- Dimension $\Phi 3.9\text{ mm}$
- Digital output
- Low power consumption
- Automatic welding procees

The OM-1310 model is a low voltage, high performance CMOS image sensor.

This cutting edge sensor provides full-frame digital images in RAW format with MIPI. It captures high quality 1280 x 720 resolution video at 30 frames per second (fps).

Furthermore, OPCOM offers automatic module welding technology to streamline the manufacturing process, facilitating the installation of LEDs into the module.

Our technology can assist in yielding a faster time-to-market, whilst remaining the industries' most cost-effective solution for single-use endoscopes.

SPECIFICATIONS

SPECIFICATIONS	
Effective Pixel	1280 x 720
Frame Rate	30 fps
Size (W*H*L)	$\Phi 3.9$
Field of View	100°
Depth of field	5-50mm
Cable Outer Diameter	1.43mm
Cable Length	1M (Default)
Connector	DP connector

OPCOM Medical

Founded in 2022, OPCOM Medical is located in Taiwan and is a subsidiary of OPCOM Inc, which has an excellent track record in producing camera systems for more than 30 years.

OPCOM Medical provides customers with complete turn-key solutions for single-use endoscopes; From component selection, design proofing, regulatory compliance, project management and flexible manufacturing capacities.

On top of those core competences, OPCOM Medical is also a ISO13485:2016 certified company and has ISO class 8 (100,000) clean room assembly facilities available.
